

arcserve®

The world of data management is getting a lot more complex, and a whole lot more stressful.

Your organization, customers and employees expect 24x7 data availability, causing the headache to ultimately reside with you. Arcserve offers the only data protection solution suite that delivers enterprise-grade capabilities without the complexity often associated with enterprise solutions.

Arcserve Unified Data Protection (UDP) combines **backup, replication, high availability and true global deduplication** technologies within one solution that helps small and over-stretched IT teams manage all aspects of data protection through a single, elegantly simple user console.

Arcserve now combines its award-winning software with enterprise-grade hardware to deliver the Arcserve UDP Appliance, the most cost-effective backup and recovery appliances available today.

It is a powerful self-contained data protection solution that can be deployed in 15 minutes or less. It's a perfect backup and recovery appliance for organizations with remote offices and decentralized IT departments.

Arcserve UDP Appliances

INNOVATIVE FEATURES

Modular Portfolio that offers 16 storage capacities protecting source data ranging from a few TBs up to 240 TB

Delivers all the advanced features of Arcserve UDP software in a simple, yet powerful appliance option

Arcserve Cloud option provides a complete, offsite backup and disaster recovery solution

Ideal for businesses that require a "set it and forget it" backup and recovery solution

Simple, wizard-driven setup for unparalleled ease of deployment and usability

Efficient global deduplication reduces backup storage requirements up to 95% (SSD)
