## Integrity Statement

CA Technologies offers this integrity statement to document our confidence in our products. This confidence stems from a comprehensive development process with extensive research, planning, coding, and testing.

Beginning with the first release of each product, we have developed all releases in compliance with IBM requirements in the IBM z/OS® System Integrity Statement, which can be found on the IBM website.

We are firmly committed to the quality and integrity of its mainframe products, by providing products and services that meet or exceed our external and internal customer requirements and to continually strive to improve our efficiency and effectiveness in doing so. We have developed, implemented, and continue to improve programs to ensure the quality and integrity of our products.

## System Integrity Mechanisms

All supported versions of our products do not introduce any known exposures within the operating system when installed under z/OS releases currently supported by IBM. This statement assumes that installation of our products complies with the procedures and practices recommended and set forth in the product's *Installation Guide*.

Our products fully comply with the requirements for maintaining operating system integrity as defined by the following IBM manuals:

- *z/OS Authorized Assembler Services Guide*
- *z/OS MVS Programming: Authorized Assembler Services Guide*

We will accept and rectify problems if the proper installation of an unaltered copy of our supported product introduces an integrity exposure in a release of z/OS currently supported by IBM. We reserve the right to provide problem fixes only for product releases that we currently support.
